## Abstracts

Mining can be carried out at the surface as well as underground. Rock drills, scoops, loader, hydraulic shovels, and draglines are used constantly in the operations of mining which causes wear and tear. This causes decrease in downtime and life of the equipment. Hence, mining lubricants play an important role in mining activities. In mining, the anti-wear performance and the need of good corrosion protection are mainly required to protect the metal surface. The mining lubricants are used to reduce costs by extending drain intervals, improving energy efficiency, and increasing equipment life. Based on the Mining Lubricant market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
