## Abstracts

Mining Metals are essential for many other industries. For example, iron ore for making steel is essential in the construction and machinery industry. The most valued metals are the so called precious metals. These include, first of all, gold, silver, and the platinum group. Gold and silver have always been signs of wealth, and still are important drivers in the financial world. Historic price developments of precious metals are among the top statistics of this branch. Less valued, but highly sought after, are the so called base metals. Iron, lead, nickel, zinc and copper are the best known base metals and are utilized in everyday life.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Mining Metals market covering all its essential aspects.
