## Abstracts

Mining Metals are essential for many other industries. For example, iron ore for making steel is essential in the construction and machinery industry. The most valued metals are the so called precious metals. These include, first of all, gold, silver, and the platinum group. Gold and silver have always been signs of wealth, and still are important drivers in the financial world. Historic price developments of precious metals are among the top statistics of this branch. Less valued, but highly sought after, are the so called base metals. Iron, lead, nickel, zinc and copper are the best known base metals and are utilized in everyday life.

Based on the Mining Metals market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
