Abstracts

Mitoquinone mesylate, also known as MitoQ or MitoQ10; is a mitochondria-targeted antioxidant designed to accumulate within mitochondria in vivo in order to protect against oxidative damage. MitoQ comprises a positively charged lipophilic cation that drives its extensive accumulation within the negatively charged mitochondria inside cells. The active antioxidant component of MitoQ is ubiquinone, which is identical to the active antioxidant in Coenzyme Q10. It is this approximately thousand-fold greater concentration of MitoQ within mitochondria that makes it more effective at preventing mitochondrial oxidative damage when compared to untargeted antioxidants such as Coenzyme Q10.

Based on the MitoQ (CAS 845959-50-4) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
