Abstracts

Mobile payments are regulated transactions that take place digitally through your mobile device. Mobile payments are gaining popularity with consumers not only for their convenience but also for their security, because with many types of mobile PoS systems, credit card data is not saved on the merchant's PoS terminal. The consumer's mobile device actually becomes a security token that generates a random code for each transaction. Depending upon the technology used, the token may be transmitted over the air (OTA) or entered manually into a keypad by the consumer.
