Abstracts

The recycling of mobile phones and devices is very important, partially because of the planned obsolescence and quick evolution of these products. As traditional cell phones quickly morphed into today's smartphone devices and other kinds of rapid evolution made certain hardware obsolete, the result has been a glut of potentially toxic electronic waste that can clog landfills and contaminate the environment. That makes mobile phone recycling an important aspect of health and safety around the world.

One method of recycling cell phones is to take the working parts of broken phones and combine them with the working parts of other used cell phones to make one ready-to-use cell phone. The rebuilt phone can then be sent back into circulation without ever needing newly manufactured parts or natural resources. Another method of cell phone recycling is to melt down and separate components of the phone, extracting the valuable natural resources such as gold and platinum.

The Mobile Phone Recycling Service market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
