Abstracts

Motion tracking, or mo-cap, is a process of digital recording of people's or objects' movements. Motion capture technology is widely used in entertainment, notably in gaming industry and filmmaking. It is also called performance capture if it refers to designing more complex patterns, such as facial expressions or finger movements. The actions of people are recorded and this information is used to create a 3D digital model. The movements are scanned many times per second and are broadcasted to the digital environment. As a result, the character reproduces the human's movements in real time.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Motion Tracking System market covering all its essential aspects.
