Abstracts

Mouth ulcers, also known as canker sores, are normally small, painful lesions that develop in the mouth or at the base of gums. They can make eating, drinking, and talking uncomfortable. Mouth ulcers are not contagious and usually go away within one to two weeks.

Most ulcers will heal completely without any intervention. Treatment can range from simply smoothing or removing a local cause of trauma, to addressing underlying factors such as the dry mouth or substituting a problem medication. Maintaining good oral hygiene and using antiseptic mouthwash or spray can prevent secondary infection, thus accelerating healing. A topical analgesic may relieve pain. Topical (gels, creams or inhalers) or systemic steroids may be used to reduce inflammation. An antifungal drug may be used to prevent oral candidiasis from developing in those who use prolonged steroids.
