Abstracts

Magnetic resonance imaging (MRI) is an imaging technique that creates detailed images of the organs and tissues in the body with the help of a magnetic field and radio waves. Doors that blocks radio frequency electromagnetic radiation is also known as MRI RF-shielding doors. The shielding can reduce the coupling of radio waves, electromagnetic fields and electrostatic fields. A conductive enclosure used to block electrostatic fields is also known as a Faraday cage. Shielding devices made from steel also offer magnetic field shielding capability. The attenuation of steel enclosures is not as large as the ones provided by shields made from copper and aluminum.
