## Abstracts

For a long time, messenger RNA (mRNA) was thought to be a poor choice for a therapeutic agent given its relatively short half-life and its immunogenicity. But mRNA is rather versatile and offers a range of advantages. mRNA lacks genomic integration and its use results in transient expression of the encoded protein. This favorable safety profile makes mRNA especially attractive for vaccines and gene editing. mRNA is well defined chemically which ensures reproducible manufacturing at high yield, purity and activity. Improvements of lipid nanoparticle formulations as a vehicle for in vivo systemic delivery of mRNA has greatly favored the development of in vivo transfection strategies.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the mRNA Vaccines & Therapeutics market covering all its essential aspects.
