Abstracts

Multi conductor cable is “an electrical cable which consists of multiple numbers of conductors with insulation sheaths placed in a single cable”. Strands of annealed tinned copper wires are used in construction of multi conductor cable. The copper wire conductors have polyethylene insulation placed inside a shield made polyester aluminum. This arrangement along with stranded tinned copper drain wire is placed in an outer sheath and forms a “multi-conductor cable”. In general, multi conductor cables are available in the configurations of 14, 16, 18, 20, 22, and 24 AWG (American Wire Gauge) systems.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Multiconductor Cable market covering all its essential aspects.
