Abstracts

As the information around signaling pathways and potentially drugable targets expands, there is increasing pressure to quickly probe these pathways. There is a greater need to understand the nature of protein-protein interactions within signaling pathways and to identify biomarkers of metabolic processes. Singleplex detection methods such as ELISA or Western blot assays are not suitable for rapid investigation of complex signaling pathways composed of several members. Multiplex Assays offers the ability to multiplex detection of several proteins from a single biological sample. Multiplex Assays allows for multiplexing of many types of assays thus reducing time, labor, and costs over traditional methods.

Based on the Multiplex Assays market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
