Abstracts

Multiplex assay is a procedure in which various analytes (such as proteins, biomolecules, growth factors, cytokines, chemokines, and others) are profiled by detecting and quantifying them simultaneously. This assay is used to amplify multiple targets in a polymerase chain reaction (PCR) and collect more information from minute quantities of proteins or other analytes in lesser time as compared to conventional methods such as ELISA.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Multiplex Detection Immunoassay market covering all its essential aspects.
