Abstracts

Multiplex assay is a procedure in which various analytes (such as proteins, biomolecules, growth factors, cytokines, chemokines, and others) are profiled by detecting and quantifying them simultaneously. This assay is used to amplify multiple targets in a polymerase chain reaction (PCR) and collect more information from minute quantities of proteins or other analytes in lesser time as compared to conventional methods such as ELISA.

Based on the Multiplex Detection Immunoassay market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
