Abstracts

Myocardial infarction or heart attack is caused due to blockage in the supply of oxygen-rich blood to heart muscles, resulting in permanent heart muscle injury and death of cells. The blockage is due to atherosclerosis, a process in which the plaque (fatty patches) is formed on the inside wall of the coronary artery or one of its smaller branches. If the plaque is ruptured, the blood clot is formed inside the artery blocking the blood flow. People with risk factors such as smoking, dyslipidemia, diabetes are more prone to myocardial infarction.
