Abstracts

Nanodiamonds (NDs), also called detonation diamonds (DND) or ultradispersed diamonds (UDD), are fine particles of diamond with a particle diameter of 4 to 6 nanometers, and are composite composed of diamond core, amorphous carbon layer, sp² carbon layer (graphene and graphite), and oxygen functional group. Due to each component and their interaction, they exhibit completely different properties from general diamond. NDs are one of the most thermally conductive and hardest materials known.
