Abstracts

The biggest difference between NAS (Natural Alternative Sweeteners) and carbohydrates and nutritive sweeteners (sugar derivatives such as xylitol, isomaltulose) is its non-nutrition. Although nutritive sweeteners do not possess the disadvantages of refined carbohydrates leading to dental caries, the absorbability determined by their structure is still difficult to overcome the problem of obesity and metabolic syndrome caused by refined carbohydrates; while NAS structure is often associated with carbon water. Compounds are not related (a few NASs that are sugar derivatives are not absorbed by the intestines), and the body does not get any energy after ingesting NAS, so in theory, NAS does not cause metabolic problems like carbohydrates.

Based on the Natural Alternative Sweeteners market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
