Abstracts

The near-infrared spectroscopy analyzer can measure the absorbance of samples at different wavelengths in the NIR region, and record the double frequency and combined frequency absorption information of the fundamental frequency vibration of molecular groups such as CH, NH or OH. Near infrared spectrum analyzer can be used for the quality indicators of dry matter, protein, water, oil, particle size, ash, starch, water absorption and selective chemical bond generation. It can also analyze the composition of food (meat and meat products, dairy products, beverages, oils, baked goods, etc.) during processing or through final product samples. The measurable parameters include water, protein, fat, free fatty acid, ethanol, density, solid, organic acid, carbohydrate and other components.
