Abstracts

The human genome is comprised of billions of points of tiny genetic code. DNA sequencing enables researchers to decode these DNA fragments, helping uncover valuable genetic information that relates to our well-being. Until recently, though, the technology didn't exist to accurately and quickly process, decode and analyze the human genome. In the last decade, DNA sequencing has been completely revolutionized.

Today, Next-Generation Sequencing (NGS) technology has made it possible to process and decode the entire human genome in as little as 24 hours. NGS technology applications enable unprecedented scalability and touch on all areas of DNA research, including whole genome sequencing and exome sequencing. These contemporary sequencing methods are much more sensitive, enabling clinicians and researchers alike to discover a greater volume of submicroscopic genetic mutations in our DNA.

The Next Generation Sequencing (Ngs) market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
