Abstracts

A lithium ion battery is a secondary battery (rechargeable battery) that mainly relies on lithium ions moving between a positive electrode and a negative electrode to operate. During charging and discharging, Li⁺ intercalates and deintercalates between the two electrodes: when charging, Li⁺ is deintercalated from the positive electrode, and the electrolyte is embedded in the negative electrode, and the negative electrode is in a lithium-rich state; The NWC lithium ion battery is a lithium ion battery using lithium nickel-manganese-cobalt oxide as the anode material.
