## Abstracts

Nuclear Cables have many types and quantities. If divided by purpose, there are five categories: power cables, control cables, measurement cables, communication cables, and fire-resistant cables (silicon insulated cables). Compared with general industrial cable, the biggest difference is that the performance requirements of nuclear power plant cable material need to be low smoke and halogen-free flame retardant. Insulating and sheathing materials for nuclear grade cables must use low smoke, non-toxic, non-corrosive, halogen-free flame retardant cable materials, such as thermoplastic flame retardant halogen-free and cross-linking flame retardant halogen-free materials. Based on the Nuclear Cable market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
