Abstracts

Nylon is one of the most popular and widely used engineering thermoplastic materials. It is cost-effective and it has excellent mechanical properties. The most common and extensively used Nylon grades are Nylon 66 and Nylon 6. Both these materials have similar properties; therefore, they can be used in place of each other. These materials have good mechanical properties and similar wear resistance. However, Nylon 66 has higher temperature resistance than Nylon 6, which makes the former a preferred material of choice for high-temperature applications.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Nylon 6 & 66 market covering all its essential aspects.
