Abstracts

Ocean freight is usually much slower than air, and customs issues and port holdups can cause additional delays. But ocean freight offers more capacity and value and it has a much better carbon footprint than air freight. Air freight is faster, safer and more reliable than ocean, but also more expensive. Air freight is best used when the cost of shipping is less than 15-20% of the value of the goods.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Ocean Freight and Air Freight market covering all its essential aspects.
