## Abstracts

The design life of the general offshore platform is about 20 years. According to the relevant regulations, if there is no other purpose, the service life must be dismantled after it expires. This is of great significance to ensuring the marine environment, navigation, and fishery production in the work area. The dismantled platforms are often old platforms that have been in operation for many years. The safety of the structures is low, and there is a large risk of lifting in parts with severe structural corrosion. Wellhead platform pipelines are dense, and it must be ensured that the residual oil and gas in the pipeline is thoroughly cleaned before dismantling. In addition, the underwater sludge cutting of the jacket is also a big problem in the demolition work.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Offshore Wellhead Platform Decommissioning market covering all its essential aspects.
