Abstracts

The design life of the general offshore platform is about 20 years. According to the relevant regulations, if there is no other purpose, the service life must be dismantled after it expires. This is of great significance to ensuring the marine environment, navigation, and fishery production in the work area. The dismantled platforms are often old platforms that have been in operation for many years. The safety of the structures is low, and there is a large risk of lifting in parts with severe structural corrosion. Wellhead platform pipelines are dense, and it must be ensured that the residual oil and gas in the pipeline is thoroughly cleaned before dismantling. In addition, the underwater sludge cutting of the jacket is also a big problem in the demolition work.

Based on the Offshore Wellhead Platform Decommissioning market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
