## Abstracts

Oil well cement is used in drilling oil and gas wells. Oil well cement is used for oil well grouting, sometimes referred to as oil well cementing. It consists of Portland or mixed cement plus additives. Oil well cement must be slowly set and able to withstand the high temperatures and pressures of these deep wells. This process plays an important role in drilling operations. The cement is mixed with water and additives to form a slurry which is then pumped into a well around the casing, which is a large tube inserted into a new borehole.
