Abstracts

Oilseed Processing is carried to extract the edible and inedible vegetable oils used for human consumption, and preparation of cosmetics, lubricants, and biofuels. Edible oils are most commonly used in food industry and households. However, from last few years, due to decrease in non-renewable sources vegetable oils are used as biofuels. Oilseed processing is carried by either chemical extraction or mechanical extraction. Oilseeds are classified into low oil content seeds which have 20% oil and high oil containing seeds which have 60% or more oil.
