Abstracts

Omega-3, omega-6 and omega-9 fatty acids are all important dietary fats. 'Omega-3' refers to the position of the final double bond in the chemical structure, which is three carbon atoms from the 'omega' or tail end of the molecular chain. Like omega-3 fatty acids, omega-6 fatty acids are polyunsaturated fatty acids. The only difference is that the last double bond is six carbons from the omega end of the fatty acid molecule. Omega-9 fatty acids are monounsaturated, meaning they only have one double bond. It is located nine carbons from the omega end of the fatty acid molecule.
