Abstracts

Optical film is a kind of optical medium material, specifically refers to the single-layer or multi-layer transparent medium film coated on the surface of optical elements or independent substrates by dry and wet production processes. These dielectric films use the transmission, reflection, absorption, scattering, polarization and other reactions of light waves to achieve various effects such as reflection, antireflection, light splitting, filtering and changing the polarization state of light beams. Optical films are widely used in LCD TVs, laptops, tablets, mobile phones and other fields. According to the different characteristics of optical films, optical films are mainly divided into brightening films, diffusion films, reflective films, shading films, antireflective films, polarizing films and other types.
