## Abstracts

Optical imaging is a technique for non-invasively capturing images of parts of the body. Visible light and photons are used to capture detailed images of internal organs and tissues. It also requires images that contain smaller structures of cells and molecules. These images are used by doctors for the diagnosis and treatment of diseases and are used by scientists for different research work.

Based on the Optical Imaging market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
