Abstracts

Chromium is an essential trace element plays an important role in glucose metabolism and lipid metabolism in human body. In 1957, Schwarz and Mertz discovered the functions of chromium in glucose metabolism and put forward the hypothesis of glucose tolerance factor (GTF). This was gradually confirmed by experiments that Cr³⁺ is the active component of GTF. After that a large number of studies have shown that Cr³⁺ in the form of GTF can assist and enhance the role of insulin, affecting the metabolism of carbohydrates, lipids, proteins and nucleic acids, influencing animal growth, reproduction, product quality, anti-stress and anti-disease capacity.
