## Abstracts

Organic fruits and vegetables are grown in the farms without using pesticides and chemical fertilizers. The growth of crops is maintained by using organic wastes such as animal waste, aquatic waste, farm waste, and other biological materials which keep the soil healthy and alive by the release of beneficial microbes and biofertilizers. Organic fruits and vegetables are healthier than the foods which are grown by using conventional farming methods that use chemicals and fertilizers which cause a harmful impact on the health. Organic fruits and vegetables have lower residues of pesticides and have greater nutritional value than inorganic fruits and vegetables.

Based on the Organic Fruits And Vegetable market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
