PP and its alloys have become the plastic of choice in the automobile market where it can provide substantial weight savings. It is used in internal and external body panels and its heat resistance makes it suitable for use for components in the engine compartment. PP's low density, combined with good mechanical properties (especially when filled or compounded) and good injection moulding characteristics, make it very suitable for the large-volume, weight-conscious automotive market. Over a third of plastics in automobiles are PP and PP alloys.

The PA-PP Alloy market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
