## Abstracts

Painting machines are used majorly for coating and painting on the exterior or interior parts of an object or equipment. Painting machines find applications in the automotive, aerospace, machinery, and construction industries. These machines are developed utilizing explosion proof arm. Once programmed, these machines can paint without inconsistencies, overspray, and drips. Thus, paint can be applied with consistency and precision. The types of painting machines include wall mounted, floor mounted, and rail mounted painting machines among others. The higher rate of accuracy provided by painting machines in comparison to humans is supplementing the adoption of these machines globally.
