## Abstracts

Passenger tyres are for vehicles that are designed for personal use – like hatchbacks, sedans, coupes, and crossovers. Many SUVs, minivans, and smaller pickup trucks (under 2 ton) also use passenger-rated tires.

The most significant difference between 4x4 tyres and standard is their purpose and versatility. Standard car tyres were designed to suit the tarmac roads that we see every day by maintaining traction. 4x4 tyres differentiate from normal tyres by priming their design for off-road conditions such as snow, grass, dirt and mud.

Based on the Passenger and 4x4 Tyres market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
