Abstracts

A patient portal is an online website that helps to maintain all data of patients. Patients, medical practitioners, and pharmacists have access to this portal at any time and place. This helps the patient to interact with the health care provider. Basic information available on the patient portal includes information about recent doctor visits, patient history, chronic diseases, discharge summaries, current medications, chronic disease medication, vaccines information, allergies, and laboratory test reports. Some patient portals have value-added service such as exchange patient information with health care teams, schedule appointments with physician, request to refill prescription, check benefits and coverage under various insurance providers, update personal information, make payments, order products, download and complete forms, and view educational and disease awareness materials. The patient portal centralizes the information about the patient which helps health care provider to act accordingly and provide effective treatment and track the patient’s health. Patient portals are affordable and easily accessible that increases the medical security and safety of the patient. These portals are helpful during emergencies when a patient is unconscious and for routine check-ups which reduce the time of the patient as well as the physician.
Based on the Patient Portal market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
