The artificial compression stress applied to neutralize tensile stress deployed by exterior force is known as prestress. The structures constructed with prestress is called PC. The wire or strand used on PC structure is known as PC wire or strand. When force is applied to the concrete, prestressing is introduced to counter the stresses resulting from the applied load. PC wires and strands are used as a medium to attain a force that can neutralize external forces such as stress or compression. Manufacturing and designing of high quality PC wires and strands have been a priority for top vendors in the market.
