Abstracts

Polycrystalline diamond (PCD) is a diamond grit that is fused together under high pressure and high temperature conditions in the presence of a catalytic metal.

Polycrystalline cubic boron nitride (PCBN) composites are made of micron-sized CBN (cubic boron nitride) powder sintered together with various ceramic materials, making it an extremely hard and thermally stable tool material. Most PCBN materials are welded together with the carbide substrate. Cubic boron nitride is second only to synthetic diamond and is the second hardest material in the world, but it has extremely high thermal stability and chemical inertness.
