## Abstracts

Polycrystalline diamond (PCD) is a diamond grit that is fused together under high pressure and high temperature conditions in the presence of a catalytic metal.

Polycrystalline cubic boron nitride (PCBN) composites are made of micron-sized CBN (cubic boron nitride) powder sintered together with various ceramic materials, making it an extremely hard and thermally stable tool material. Most PCBN materials are welded together with the carbide substrate. Cubic boron nitride is second only to synthetic diamond and is the second hardest material in the world, but it has extremely high thermal stability and chemical inertness.

Based on the PCD and PCBN Material market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
