## Abstracts

The Pebble Bed Modular Reactor is a small modular nuclear reactor. The fuel is uranium embedded in a tennis-size ball made of graphite. PBMR has many advantages over traditional large reactors. They have much lower capital and operating costs and use inert gas instead of water as the coolant. Therefore, they do not require large complex water cooling systems of conventional reactors, and inert gases do not dissolve and carry contaminants.

Based on the Pebble Bed Modular Reactors (PBMR) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
