Abstracts

Clinical trials used by children to study and develop drugs or new drugs are called pediatric clinical trials. Most clinical trials are conducted in adults and very rare clinical trials, including children. To increase the level of participation of children in clinical trials, the United States has developed a regulatory and health strategy that focuses on the overall market for drugs when incorporated into pediatric clinical trials. According to the World Bank Group, approximately 26% of the world's population includes pediatrics (children between the ages of 0-14), rather than 10 times more clinical trials for adults than pediatrics. Because of the lack of pediatric clinical trials, ethical issues, and the infrastructure of pediatric diseases are relatively lower than those found in adults, pharmaceutical companies are paying more attention to drug development in adults.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Pediatric Clinical Trials market covering all its essential aspects.
