Abstracts

Polyether ether ketone (PEEK) is a semi-crystalline thermoplastic, which is inert and a thermally stable polymer. It has applications in nuclear, aerospace, temperature resistance interface, medical implants, etc. It has specific properties such as high temperature resistance, hydrolysis resistance, self-lubrication, easy processing, and high mechanical strength. PEEK produces small amount of smoke or toxic gas emissions when exposed to flame. It melts at a relatively high temperature compared to other thermoplastics and the range of its melting temperature can be processed using injection molding, extrusion methods, spray forming, or pressing methods.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the PEEK (polyether-ether-ketone) market covering all its essential aspects.
