## Abstracts

Polyether ether ketone (PEEK) is a semi-crystalline thermoplastic, which is inert and a thermally stable polymer. It has applications in nuclear, aerospace, temperature resistance interface, medical implants, etc. It has specific properties such as high temperature resistance, hydrolysis resistance, self-lubrication, easy processing, and high mechanical strength. PEEK produces small amount of smoke or toxic gas emissions when exposed to flame. It melts at a relatively high temperature compared to other thermoplastics and the range of its melting temperature can be processed using injection molding, extrusion methods, spray forming, or pressing methods.

Based on the PEEK(polyether-ether-ketone) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
