Abstracts

Electrical stimulation of pelvic floor is a painless and effective method to treat urinary incontinence, frequent micturition and urgency. Pelvic floor electrical stimulation devices are usually used for patients with frequent urination, urgency or urinary incontinence due to overactive bladder. It is also used to help women with weak vaginal muscle tension strengthen the pelvic floor. In the process of pelvic floor electrical stimulation, low-grade electrical current stimulates muscle contraction, and produces muscle response similar to Kegels (pelvic floor muscle exercise). This exercise can strengthen pelvic floor muscles, thus improving frequent urination, urgency and urinary incontinence, and increasing the strength of pelvic floor and vaginal muscles. This report studies the global pelvic floor electrical stimulation devices market.
