Abstracts

Sodium periodate is an inorganic salt, composed of a sodium cation and the periodate anion. It may also be regarded as the sodium salt of periodic acid. Like many periodates it can exist in two different forms: sodium metaperiodate, which has the formula NaIO_4 , and sodium orthoperiodate, normally this means sodium hydrogen periodate ($\text{Na}_2\text{H}_3\text{IO}_6$) but the fully reacted sodium orthoperiodate salt, Na_5IO_6 , can also be prepared. Both salts are useful oxidising agents.

Based on the Periodates market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
