Abstracts

A glass electrode is perhaps the most successful and ubiquitous electrochemical sensor. It provides information about the activity of hydronium ions, H_3O^+ , in water. Because water, which mildly dissociates to H_3O^+ and OH^- ions, is the most common solvent medium, and chemical reactions in water largely depend on H_3O^+ activity, the ability to measure it is essential. And conversely, because H_3O^+ activity, or rather, its negative logarithm, the pH, is so easy to measure, pH is the most commonly monitored and recorded parameter of liquid samples.

The PH Electrochemical Electrodes market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
