Abstracts

Phenylephrine hydrochloride (PE) is a post-synaptic α -receptor agonist, with low cardioselective α -receptor affinity. It has a recognised decongestant activity, by vasoconstriction, to reduce oedema of the nasal mucosa. α -adrenergic receptors are found on pre- and post-capillary blood vessels in the nasal mucosa, stimulation of which causes constriction of vascular smooth muscle. As a consequence, nasal blood flow is reduced leading to a reduction in nasal mucosal swelling. The tablets are indicated to relieve nasal congestion associated with colds and hayfever.
