## Abstracts

Phoropters are medical devices used for ophthalmic testing. They are commonly known as refractors. Phoropters are most commonly used by ophthalmologists during eye examination. They contain different lenses that are used for the refraction of the eye during sight testing. Phoropters are also used to measure an individual's refractive error and determine his or her prescription. During sight testing, phoropters are used to switch multiple lenses in the front of the eyes to correct vision.

Based on the Phoropter market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
