Abstracts

PA is a unique lipid molecule that acts as a direct regulator of mTOR signaling. In other words, PA effectively 'turns on' muscle protein synthesis in response to resistance exercise. Given the apparent role of PA in mTOR activation, researchers have started to question whether simply increasing the amount of PA in the diet would exert a favorable impact on muscle growth and strength. It is noteworthy to mention that PA can be found naturally in the diet, but only in extremely small quantities. PA is found in the largest quantities in vegetables such as cabbage, which contain 0.5 milligrams per gram.
