## Abstracts

A photographic printing equipments is a machine device for producing a final image on paper for viewing. The paper is exposed to a photographic film, positive transparency (or slide), or a digital image file projected using an amplifier or digital exposure device such as a LightJet printer. Alternatively, a negative or transparency can be placed on top of the paper and exposed directly to produce a contact print. Photographs are more commonly printed on plain paper, such as by color printers, but this is not considered 'photographic printing.'
